General remarks:

1. The test results presented in this report relate only to the object tested.

2. This report shall not be reproduced, except in full, without the written approval of the Issuing Testing Laboratory.

The authenticity of this Test Report and its contents can be verified by contacting the Testing Laboratory, responsible for this Test Report.

Page 2 of 10

3. The general information of applicant and manufacturer (such as the name and address), product name, model/type reference, trademark and other similar information contained in this report are all provided by the applicant, the laboratory is not responsible for verifying its authenticity.

4	Designations		
4.1	Arrangement of the IK code	IK03	
	IK 05		
	Codes letters (international mechanical protection)		
	Characteristic group numeral (00 to 10)		
4.2	Characteristic group numerals of the IK code and their meanings	See table 1 of IEC	
	Each characteristic group numeral, represents an impact energy	62262, IK03 Impact	
	value as shown in Table1.	energy Joule 0.35J	-n.UA
4.3	Application of the IK code	十田位司	N/A
NS	In general the degree of protection applies to the complete	LCS Test	lua.
Les	enclosure. If parts of the enclosure have differing degrees of		
	protection, the latter shall be separately indicated.		
4.4	Marking		
	In case where the relevant product committee decides that	IK03	Р
	marking of the IK-code shall be required, the marking		
	requirements shall be detailed in the relevant product standard.		
	Where appropriate, such a standard should also specify the		
	method of marking which is to be used when:		
- at F	-one part of an enclosure has different degree of protection to	品份	N/A
七讯检测	that of another part of the same enclosure;	ing Lab	,也识检测
LCSTEST	—the mounting position has an influence on the degree of	15	N/A
	protection.		
5	General requirements for tests	-	
5.1	Atmospheric conditions for tests		Р
	Unless otherwise specified in the relevant product standard, the		
	test shall be carried out under the standard atmospheric		
	conditions for tests described in IEC60068-1as:		
	Temperature range15°C to 35°C	25°C	Р
	Air pressure 86kPa to 106kPa (860mbar to 1060mbar)	96kPa	Р
	When the altitude at which the test is performed is higher than	Below 2000m	N/A
	2000m the height of fall shall be adjusted where necessary to	工计研究	ing Lab
-192	result in the specified impact energy.	LCS ICS IC	
5.2	Enclosures under test		Р
	Each enclosure under test shall be in a clean and new condition,		Р
	complete with all their parts in place unless otherwise specified		
	in the relevant product standard.		
5.3	Specifications to be given in the relevant product standard		
	The relevant product standard shall specify:		
	-the definition of "enclosure" as it applies to the particular type		N/A
	of equipment;		

Shenzhen Southern LCS Compliance Testing Laboratory Ltd. Add: 101-201, No.39 Building, Xialang Industrial Zone, Heshuikou Community, Matian Street, Guangming District, Shenzhen, China

23

	—the test equipment (e.g. pendulum hammer, spring hammer or	E	Р
	vertical hammer, seeClause7);		
	—the number of samples to be tested;	1	Р
	—the conditions for mounting, assembling and positioning the		Р
	samples, e.g. by the use of an artificial surface(ceiling, floor or		
	wall), in order to stimulate intended service conditions as far as		
	possible;		
	—the pre-conditioning, if any, which is to be used;		N/A
	—whether to be tested energized;	No energized	N/A
	—whether to be tested with any moving parts in motion;	No moving parts	N/A
VS	—the number of impacts and their points of application (see 6.3).	ST LCS Test	Р
	In the absence of such specifications in the relevant product		Р
	standard, conditions of this standard shall apply.		
6	Test to verify the protection against mechanical impacts		L
6.1	The tests specified in this standard are type tests.		
6.2	In order to verify the protection against mechanical impacts		Р
	blows shall be applied to the enclosure to be tested. The device		
	to be used for this test are described in Clause7.		
6.3	During the test the enclosure shall be mounted, according to the	Displacement is less	Р
R Inc.	manufacturer instructions for use, on a rigid support. A support is	than or equal to	E Stand
古语检测的	considered to be sufficiently rigid if its displacement is less than	0,1mm	- 女讯检测
LCS Testi	or equal to 0,1mm under the effect of an impact directly applied	15	LCS Testi
	and whose energy corresponds to the degree of protection.	E	
	Alternative mounting and support, suitable for the product, may		
	be specified in the relevant product standard.		
6.4	The number of impacts shall be five on each exposed face	5 points, 3 times per	Р
	unless otherwise specified in the relevant product standard. The	point	
	impacts shall be evenly distributed on the faces of the enclosure		
	(s) under test. In no case shall more than three impacts be		
	applied in the surroundings of the same		
6.5	Test evaluation		NR HIP
	The relevant product standard shall specify the criteria upon	立讯检测	ingLab
18	which the acceptance or rejection of the enclosure is to be based	STLCSTO	
	on particularly:		
	—admissible damages;	No damage	Р
	-verification criteria relative to the continuity of the safety and	No broken	Р
	reliability of the equipment.		
7	Test apparatus		
	The test shall be done by using one of the test apparatus as		Р
	described in EN60068-2-75.

	The striking surface shall be visually examined before each	See Figure 1	Р
	impact in order to ensure that there is no damage that might		
	affect the result of the test.		
7.1	Test Ehc: Vertical hammer		N/A
7.1.1	The hammer consists basically of a striking element which falls		N/A
	freely from rest through a vertical height, selected from table2 of		
	IEC 60068-2-75, on to the specimen surface held in a horizontal		
	plane. The characteristics of the striking element shall comply		
	with table 1 of IEC 60068-2-75. The fall of the striking element		
	shall be along a guide way, for example a tube, with negligible	古田位別	
	braking. This guide way shall not rest on the specimen and the	LCS Test	
	striking element shall be free of the guide way on striking the		
	specimen. In order to reduce the friction, the length I of the		
	striking element shall not be smaller than its diameter D, and a		
	small gap (for example 1 mm) shall be provided between the		
	striking element and the guide way.		
7.1.2	Height of fall		N/A
	The height of fall is given in table2 of IEC 60068-2-75, the		N/A
	equivalent mass stated therein being equal to the actual mass of		
anni a'	the striking element.	the work	50 (¹² 3)
7.2	Test Eha: Pendulum hammer	ing Lab	N/A
7.2.1	Test apparatus	-Vi	N/A
7.2.1.1	Test apparatus for severities not exceeding 1 J		N/A
7.2.1.2	Test apparatus for severities of 2 J and above		N/A
7.2.2	Height of fall		N/A
	To produce impacts of the required severity, the striking element		N/A
	the pendulum, according to Table 2 of IEC 60068-2-75.		
7.2.3	Testing		N/A
VIS	In order to avoid secondary impacts, i.e. rebounds, the hammer	IST CS Test	N/A
	is retained after the initial impact by grasping the striking	The real	
	element whilst avoiding the arm so that distortion is prevented.		
7.3	Test Ehb: Spring hammer		Р
7.3.1	Test apparatus		Р
7.3.2	Influence of earth's gravity		Р
	The downward/upward variation is taken into account when		Р
	establishing the actual energy delivered.

REMARKS:

1. The test report is valid for above tested sample only and shall not be reproduced in part without written approval of the laboratory.

2. Characterization & Condition of Sample: Normal.

Table 1 of IEC 62262-2002:

Table 1- Relation between IK code and impact energy

lKcode	IK00	IK01	IK02	IK03	IK04	IK05	IK06	IK07	IK08	IK09	IK10
Impact energy Joule	a	0,14	0,2	0,35	0,5	0,7	1	2	5	10	20 ²⁰
Not protected according to this standard											

NOTE 1 When higher impact energy is required the value of 50 Joule is recommended.

NOTE 2 A characteristic group numeral of two figures has been chosen to avoid confusion with some

former national standards which used a single numeral for a specific impact energy.

Table 2 of IEC 60068-2-75:

Table 2- Height of tall

Energy J	0,14	0	,2	(0,3)	0,35	(0,4)	0	,5	0,7	1 (********	(₆₎ 2	5	10	20	50
Equivalent mass kg	0,25	(0,2)	0,25	(0,2)	0,25	(0,2)	(0,2)	0,25	0,25	0,25	0,5	1,7	5	5.0	10
Height of tall mm±1%	56	(100)	80	(150)	140	(200)	(250)	200	280	400	400	300	200	400	500

NOTES

1 See note in 3.2.2.

2 In this part of IEC 60068, the energy, J, is calculated taking the standard acceleration clue to the earth's Gravity(g_n), rounded up to the nearest whole number, that is 10m/s².
